

ANGEL FOUNTAIN

This beautiful water fountain originally made in the 1880's has been reproduced in a traditional process that has changed little over the centuries.

The method of producing quality castings involves wooden patterns being placed in sand to form moulds, the pattern is removed and molten metal is poured into the cavity. When cool the sand is broken away, each piece is then cleaned and the fountain is assembled.

Many hours of skilled workmanship has contributed to this unique and impressive ornament.
